## Education in Heart

### Congenital Heart Disease

## Cardiac pacing in infants and children

Karen A McLeod

### Correspondence to

Dr Karen A McLeod, Royal Hospital for Sick Children, Glasgow, Yorkhill, Dalnair Street, Glasgow G3 8SJ, UK; [karen.mcleod@ggc.scot.nhs.uk](mailto:karen.mcleod@ggc.scot.nhs.uk)

Paediatric pacemaker implants comprise <1% of all pacemaker implants.<sup>w1</sup> When it is considered that the mean age of pacemaker implantation in the adult population is 75.5 years, compared with <10 years in the paediatric population, the problems of small size, growth and truly chronic pacing faced by the paediatric implanter are fully appreciated.<sup>w1</sup>

### Who needs a pacemaker in childhood?

The American College of Cardiology/American Heart Association/Heart Rhythm Society (ACC/AHA/HRS) 2008 guidelines for device-based therapy of cardiac rhythm abnormalities include up to date guidelines for implantation of pacemakers in children, adolescents and patients with congenital heart disease.<sup>1</sup> The main indication for pacing in childhood is symptomatic or worrying bradycardia, the most common being complete heart block (box 1).<sup>2</sup>
